

Task Title: To-Do List App

[1]Objective:

To design and develop an interactive, browser-based quiz application that tests users' knowledge of web development fundamentals (HTML, CSS, JavaScript, and related concepts) through a timed, randomized question format. The project aims to deliver an engaging user experience through dynamic theming, real-time scoring, animated visual feedback, and a detailed performance review system — while reinforcing core front-end development skills including DOM manipulation, event handling, CSS animations, and state management using JavaScript.

[2]Project Description:

QuizCraft Pro is a fully client-side, single-page quiz application built using HTML5, CSS3, and vanilla JavaScript. The application presents users with a randomly selected set of multiple-choice questions drawn from a curated pool of web development questions, each with shuffled answer options and a countdown timer per question.

Key Features:

Dual Theme Support-Switch seamlessly between Dark Mode and Light Mode with smooth transitions, providing a personalized and visually appealing user experience.

Randomized Question Engine-Questions and answer choices are shuffled for every quiz attempt using the Fisher-Yates algorithm, ensuring a unique experience each time.

Time-Based Scoring System-Earn points based on both answer accuracy and response speed, encouraging quick thinking and better performance.

Instant Answer Feedback-Selected answers are highlighted immediately, showing correct and incorrect responses with visual indicators.

Live Progress Tracking-Track quiz progress in real time through a dynamic progress bar and question counter.

High Score Storage-Best scores are automatically saved using Local Storage and remain available across browser sessions.

Performance Badges-Receive achievement badges such as Beginner, Intermediate, Advanced, and Expert based on overall quiz performance.

Detailed Answer Review-Review all questions after completing the quiz and compare your answers with the correct ones.

Interactive Animations-Enjoy floating particles, animated backgrounds, confetti celebrations, and smooth UI transitions for an engaging experience.

Keyboard Accessibility-Answer questions quickly using keyboard shortcuts (1–4), improving accessibility and user convenience.

[6]Hosted Project Link:

<https://cherrychikky1234-alt.github.io/To-Do-List-App/>

[7]Conclusion:

Successfully developed and deployed the project using HTML, CSS, and JavaScript. The project helped in improving practical skills in web development.
